## Contents

1. Caption for Table S1

## Introduction

This supporting information includes Table S1 detailing the GPS stations used to carry out the assessment presented in the main text and the observed and predicted rates from each GIA solution at each site.

Caption Table S1. GPS sites specifications including their geographical locations, observation period and Digital Object Identifiers (when available). An internal ID has been given to each GPS site and is referred to in the main text. Observed uplift rates and predicted rates (in  $\text{mm yr}^{-1}$ ) from each GIA solution included in this study are given for each site.
